Create an Alert

Create an Alert from the Dashboard

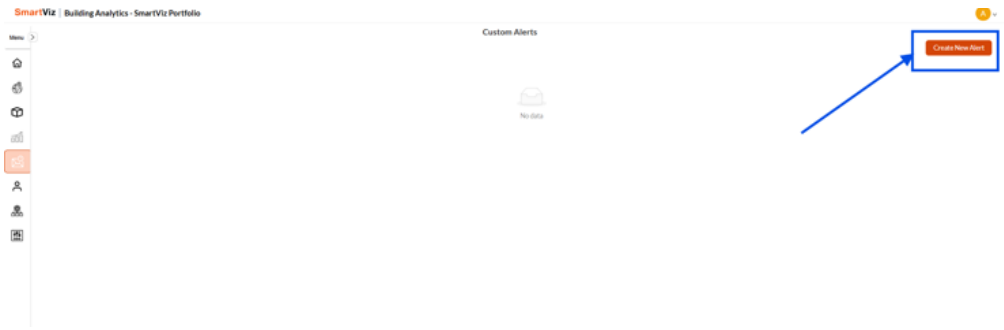

1. Open the **Portfolio** where you want to set the alert.

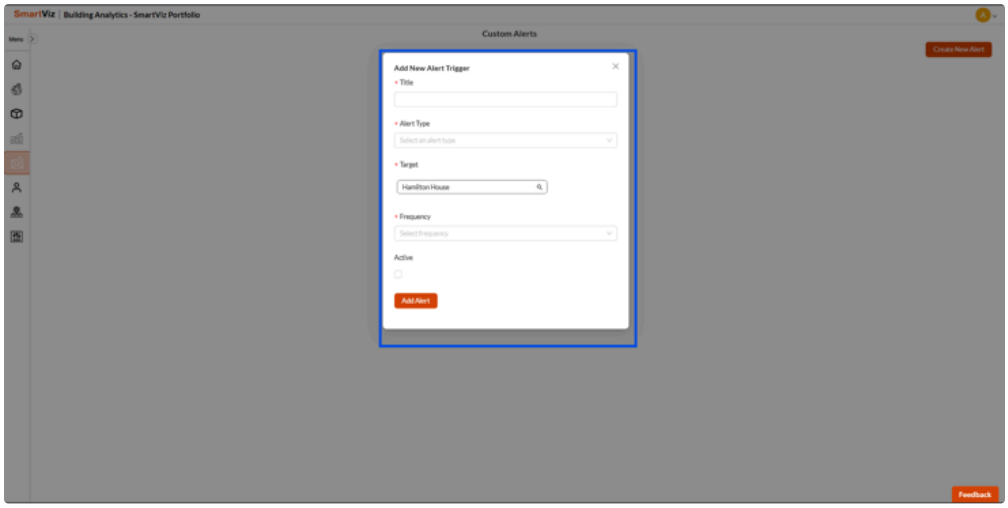

2. From the left-side panel, go to the **Alerts** section.

3. Click **Create New Alert** (top-right corner).

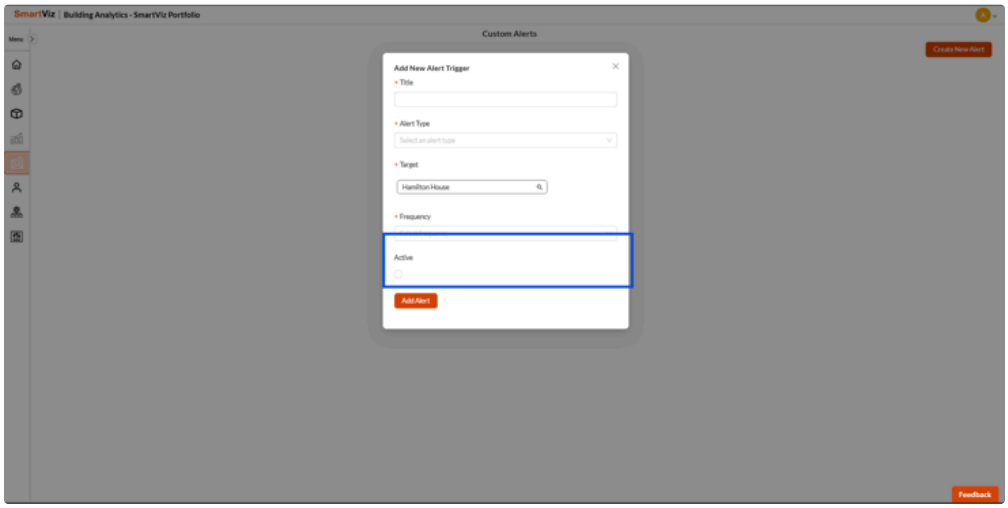

4. A dialog box will open.

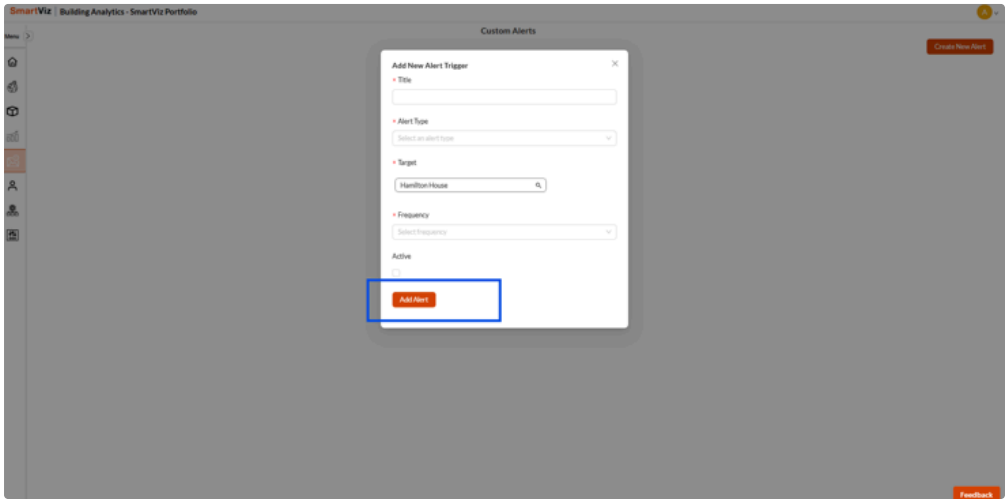

5. **Required Details**

- **Title** – Give a name for the alert (e.g., *Gateway Status and portfolio name* or *Sensor Status Alert and portfolio name*).
- **Type** – Select whether the alert is for **Gateway** or **Sensor**.
- **Target** – Choose the level where the alert should apply:
  - Entire **Portfolio**
  - Specific **Campus**
  - Specific **Building**
- **Frequency** – Select how often the alert should trigger:
  - Daily
  - Weekly
  - Monthly

- **Active** – Tick the **Active** checkbox.

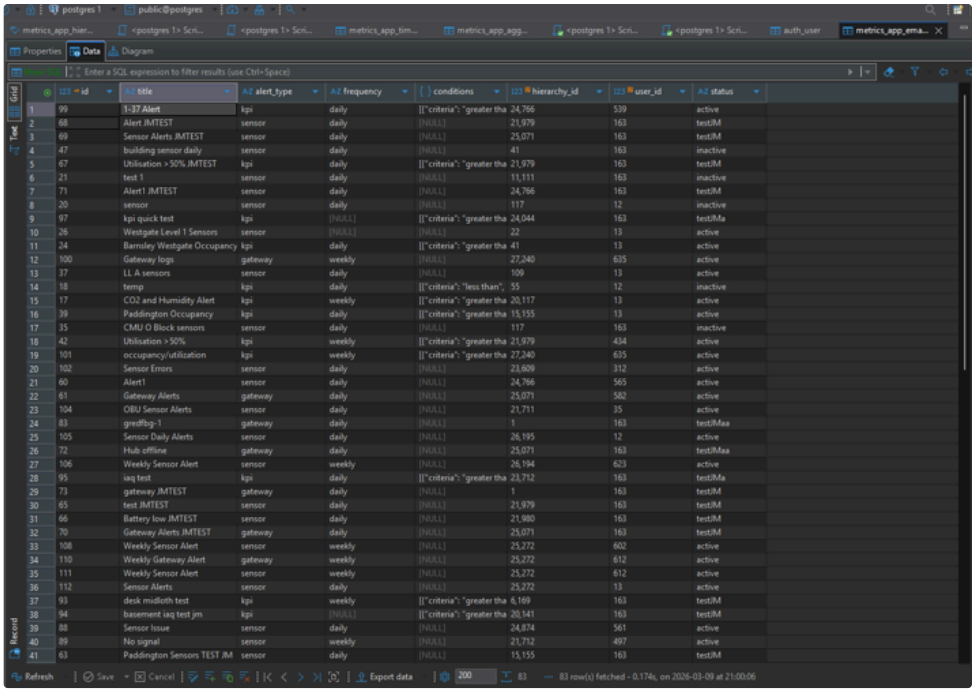

6. Click **Add Alert** to create the alert.

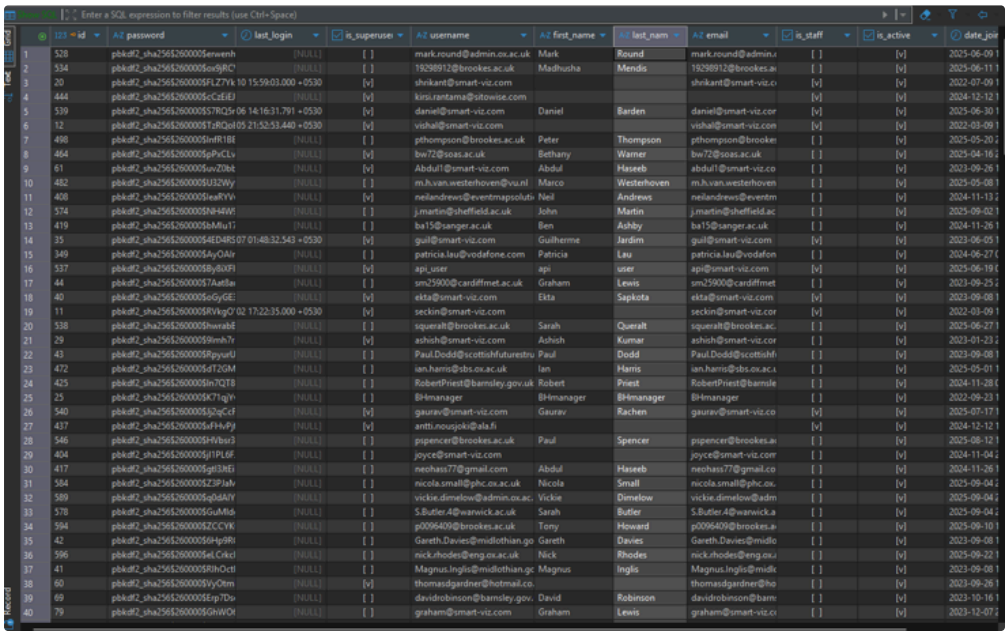

Configure Alert Recipient (Database Step)

7. Open the **Database (DB)**.
8. Open the following tables:
   - metrics_app_emailalerttrigger

- auth_user

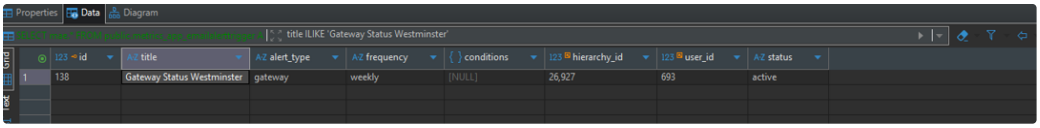

Find the Alert Record

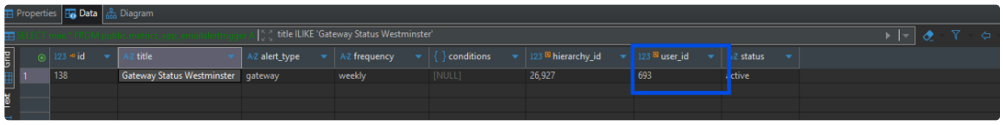

9. Open the **metrics_app_emailalerttrigger** table.
10. Search for the alert using the title you created.

Example query:

title ILIKE 'Gateway Status Westminster'

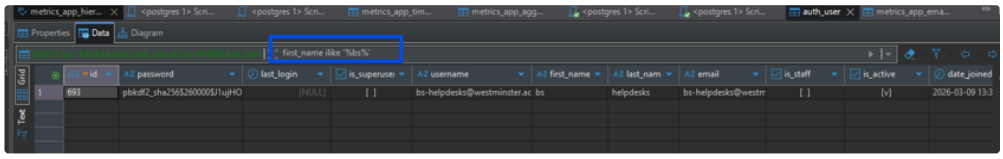

11. Copy the **user_id** value from this record.

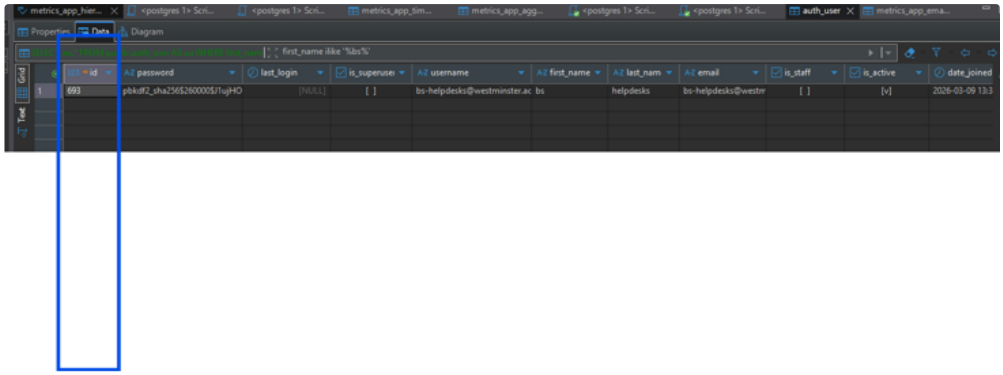

12. Open the **auth_user** table.
13. Search for the user using **first_name** or **last_name**.

    Example query:

    first_name ILIKE '%username%'

14. Locate the **id** column for that user.

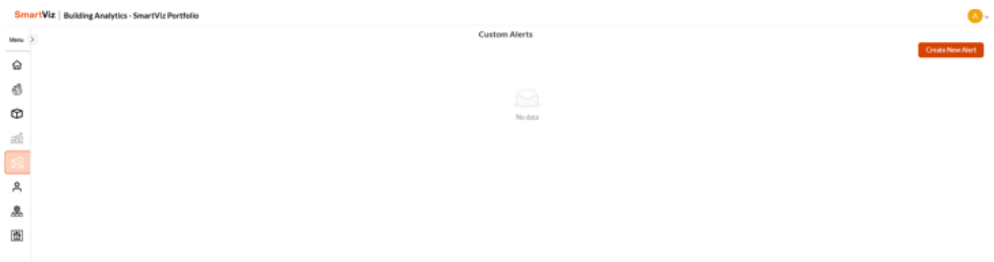

15. Replace the **id** with the **user_id** value from the metrics_app_emailalerttrigger table.

16. Click **Save**.

Verify the Alert

17. Return to the **Dashboard**.
18. Open the **Alerts** section again.
19. If the alert is no longer visible in the front end, it means the alert has been successfully configured in the system.

✅ **Alert setup is now done**

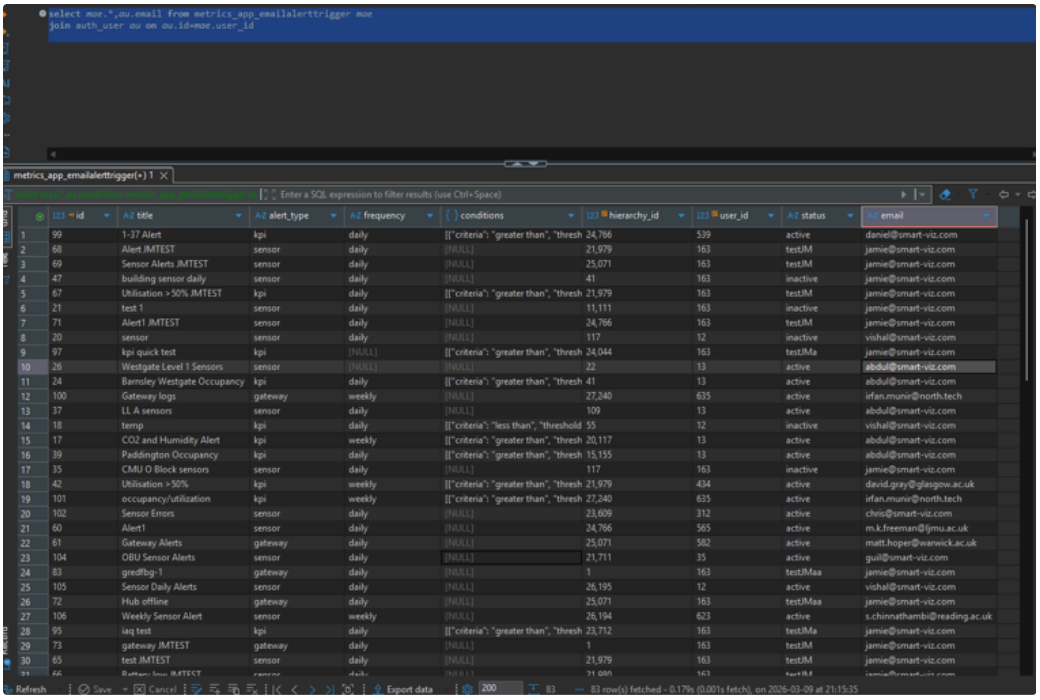

You can use this query to check which portfolios already have sensor or gateway alerts configured. This helps avoid creating duplicate alerts for the same portfolio.

It will also show you which portfolios currently have alerts set up.

QUERY

select *mae*.*,*au*.email **from** metrics_app_emailalerttrigger *mae*

join auth_user *au* **on** *au*.id=*mae*.user_id

select moe.*,au.email from metrics_app_emailalerttrigger moe
join auth_user au on au.id=moe.user_id
metrics_app_emailalerttrigger(•) 1
